

# New Service now Available

## Sexual & Reproductive Health Hub at Mill Park

Through our Sexual and Reproductive Health clinic, DPV Health offers information and supports to all women, girls and gender diverse people in the community regarding contraception, pregnancy options, termination and sexual health testing and treatment.

Our specialised and experienced team of practice nurses and doctors deliver a range of services that assist in managing all matters related to women's sexual and reproductive health. The service is delivered in a non-judgemental and respectful way, with client choice and privacy at the centre of everything we do.

### What services do we offer?

**At the Mill Park Sexual and Reproductive Health Hub, we provide information and support for the following:**

- Information, advice, and administration of all forms of contraception, including oral, injectables, and long-acting reversible contraception, such as IUDs and Implanon.
- Pregnancy support, advice, and guidance, including fertility advice, antenatal care, and terminations.
- Sexually Transmitted Infection (STI) testing, treatment and support
- HPV and Mpox vaccinations
- Access to health screening including cervical, breast and bowel screening
- Referrals to other allied health services, as appropriate

The initial point of contact for all clients accessing the service will be through an appointment with a sexual health trained Practice Nurse. During this appointment, the nurse will conduct a comprehensive Sexual Health Assessment (Sexual Health history taking and initial support). Depending on the presenting medical conditions, the nurse will organise with the Doctor for any pre-appointment examinations, such as blood tests.

After completion of the assessment, the nurse will book an appointment for the client with the most suitable Doctor.
